PSScript Manager Training

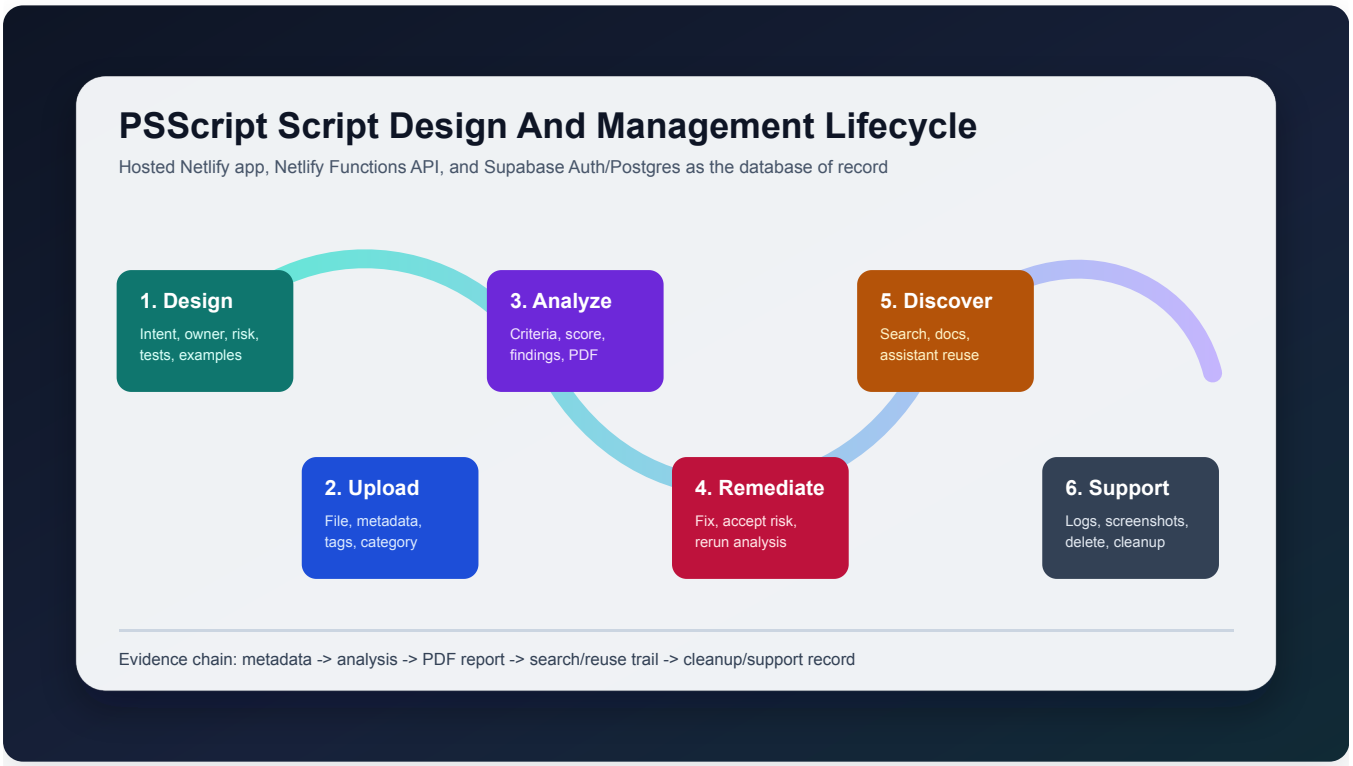
PSScript Training Suite

Last updated: April 29, 2026.

This training suite is aligned to the current hosted PSScript app: Netlify for the UI/API, hosted Supabase for Auth/Postgres, admin approval for access, responsive desktop/mobile UI, upload/delete management, hosted script editing, VS Code `.ps1` export, AI runtime requirements, PDF analysis export, and support operations.

The suite teaches the full lifecycle of script design and management: intake, design review, upload, metadata, analysis, remediation, discovery, export, deletion, governance, and support.

Lifecycle Map



The operating model follows three rules:

- Hosted Supabase is the system of record. Do not use a local database for training or production workflows.
- Netlify deploys the UI and API functions together, so training and support evidence should include the active deploy URL and Function logs.

- Every script lifecycle action should leave evidence: metadata, analysis result, PDF report, support note, or cleanup record.

What You Will Learn

Capability	What it teaches	Current screen
Access	Supabase login, pending approval, enabled profile gate	`../screenshots/readme/login.png`
Script intake	Uploads, metadata, versioning, delete, bulk delete	`../screenshots/readme/scripts.png`
Script edit	Hosted edit, save, and VS Code `.ps1` export	`../screenshots/readme/script-edit-vscode.png`
AI analysis	Criteria payload, security score, runtime requirements, remediation, PDF export	`../screenshots/readme/analysis-runtime-requirements.png`
Discovery	Keyword/vector search and documentation-assisted review	`../screenshots/readme/documentation.png`
Assistant	Chat and agentic route aliases through `/ai/assistant`	`../screenshots/readme/agentic-assistant.png`
Operations	Netlify deploy health, Supabase-backed data maintenance	`../screenshots/readme/data-maintenance.png`
Mobile	Topbar, drawer navigation, responsive cards	`../screenshots/readme/dashboard.png`

Current Environment

- Production app: `https://pstest.morloksmaze.com`
- API: same-origin Netlify Functions under `/api/*`
- Database: hosted Supabase Postgres with RLS and `pgvector`
- Auth: Supabase Auth plus admin approval
- Local database: not used
- Upload limit: hosted uploads are capped at 4 MB in the UI to stay below Netlify buffered Function payload limits after binary overhead.

For classroom UI walkthroughs that must avoid hosted mutations, run the frontend locally with mock data:

```
cd src/frontend
VITE_DISABLE_AUTH=true VITE_USE_MOCKS=true npm run dev -- --host 127.0.0.1
```

For production-like auth labs, use the hosted app and an approved account.

Screenshot Gallery

Use the screenshot atlas when building training decks or support runbooks: `SCREENSHOT-ATLAS.md`.

AI Analysis: README Screenshot 1777439375493-c9789b95 Inventory Audit

Comprehensive analysis and improvement recommendations for your PowerShell script

Back to Script | Dashboard

Overview | Security | Criteria | Code Quality | Performance | Parameters | Psscript AI

AI Agent Analysis

Run deep multi-agent analysis with LangGraph orchestrator for comprehensive security scanning, quality assessment, and optimization recommendations.

AI Model: O4 Mini (Reasoning)

Analyze with AI Agents

Analysis Summary

Collects basic operating system inventory for a target Windows host and reports the result without changing system state.

Criteria version 2026-04-26

Quality	Security	Risk
8.1 /10	8.4 /10	2.2 /10

Key Findings

Security Assessment
This script follows good security practices.

Code Quality
Code quality is high with potential for optimization.

Curriculum Map

Module	Description	Duration	File
Module 01	Platform Foundations	45 min	`modules/module-01-foundations.md`
Module 02	Script Lifecycle	60 min	`modules/module-02-lifecycle.md`
Module 03	AI Analysis and PDF Export	75 min	`modules/module-03-analysis.md`
Module 04	Search and Discovery	45 min	`modules/module-04-search.md`
Module 05	Operations and Governance	60 min	`modules/module-05-operations.md`

Professional Support Suite

Document	Use
`SCRIPT-LIFECYCLE-SUITE-2026-04-29.md`	Complete script design and management lifecycle playbook
`TRAINING-GUIDE.md`	Facilitator agenda, role paths, lab timing, and evaluation
`SCREENSHOT-ATLAS.md`	Screenshot inventory and recommended use
`../SUPPORT.md`	Support intake, escalation, and operational evidence guide

Labs

Lab	Goal	File
Lab 01	Upload, analyze, and export a script report	`labs/lab-01-upload-analyze.md`
Lab 02	Search and similarity	`labs/lab-02-vector-search.md`
Lab 03	Documentation and assistant workflows	`labs/lab-03-docs-chat.md`
Lab 04	Analytics and governance checks	`labs/lab-04-analytics.md`
Lab 05	Governance, support evidence, and safe cleanup	`labs/lab-05-governance-support.md`

Assessment Rubric

Skill area	Basic	Proficient	Advanced
Access	Signs in and recognizes pending approval	Explains enabled-profile gate	Troubleshoots redirects and profile state
Script hygiene	Uploads and tags scripts	Uses versioning and dedup signals	Safely deletes/bulk deletes test data
AI analysis	Reads scores and runtime notes	Applies remediation	Exports and shares PDF evidence
Search	Uses keyword search	Applies filters	Explains embedding-backed similarity
Operations	Reads health state	Uses Netlify/Supabase logs	Runs safe backup-first maintenance
Mobile	Opens key screens	Uses drawer navigation	Confirms no overlap at phone width

Support

- Current setup: `../GETTING-STARTED.md`
- Production deployment: `../NETLIFY-SUPABASE-DEPLOYMENT.md`
- Support and escalation: `../SUPPORT.md`
- Data maintenance: `../DATA-MAINTENANCE.md`
