

Module 04: Search and Discovery

Objectives

- Use keyword search and filters
- Use vector search for similarity
- Compare results and refine queries

Walkthrough

1. Navigate to Search or Scripts.
2. Run a keyword search for a common cmdlet (example: Get-ADUser).
3. Apply filters for category or tag.
4. Use semantic search to find similar scripts.

Search modes

Search Modes

Keyword Search

Exact matches for cmdlets and strings

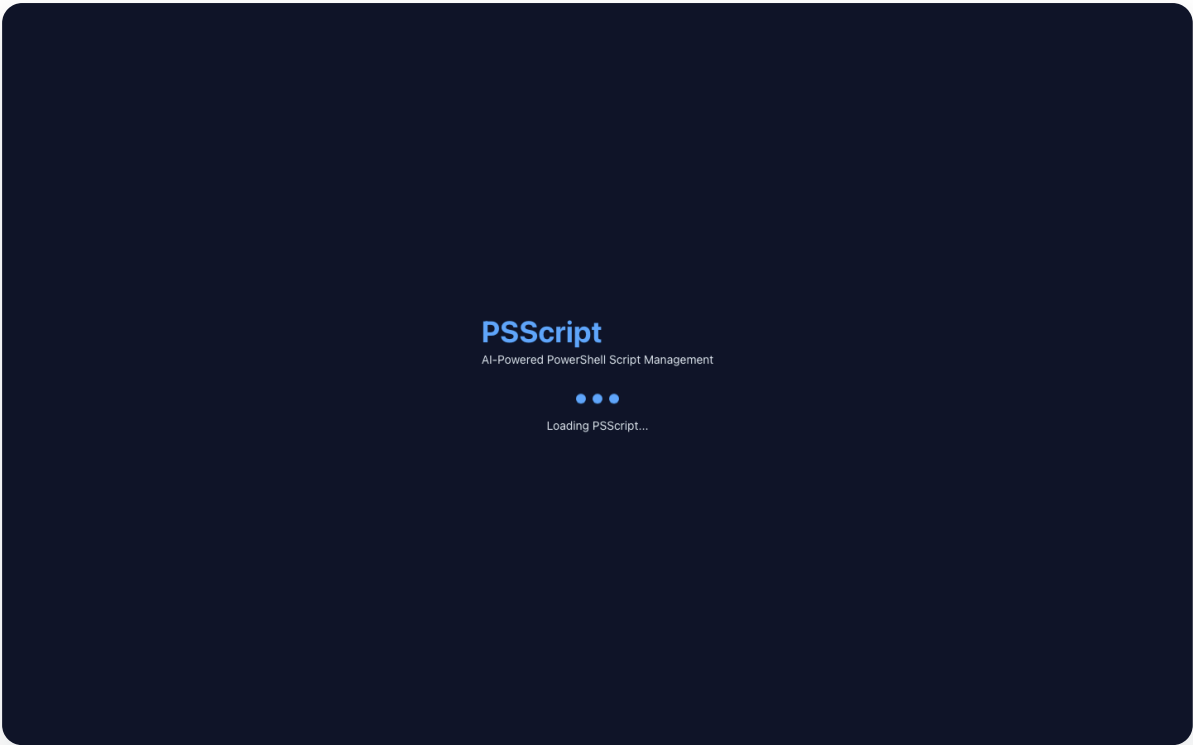

Vector Search

Semantic matches via embeddings

Hybrid Search

Keyword + semantic ranking

Screenshots

Query patterns

Query	Mode	Expected outcome
Get-ADUser	Keyword	Exact cmdlet matches
onboarding workflow	Vector	Semantically similar scripts
reset password	Hybrid	Mixed exact + semantic ranking

Verification checklist

- You can filter by category or tag
- Similar scripts surface when vector search is enabled
